EDUCATION

B.S. Cybersecurity & Information Assurance — Univ. of Michigan–Dearborn

Expected Dec 2026

Relevant Coursework: Practical Computer Security, Computer Networks & Distributed Processing, Introduction to Cryptography | Dean's List (Winter 2024)

TECHNICAL SKILLS

Security tools: Wireshark, Nmap, tcpdump, Kali Linux, Burp Suite, OpenSSL, Metasploit (lab), SIEM

Systems & network: Linux (Ubuntu, Kali), VirtualBox, TCP/IP, DNS, SSL/TLS, Bash | NIST CSF

Programming: C++, Python

Cloud: AWS fundamentals | IAM, EC2, security fundamentals

WORK HISTORY

Security Analyst Intern — Covision Performance

Jun 2025 – Present

- Researched and evaluated WAF, bot detection, and log management tools for API security compliance
- Built a legal risk assessment covering audit deadlines, breach notification rules, and indemnification terms
- Drafted a Vulnerability Disclosure Policy and security.txt file for public trust center deployment

Restaurant Manager — Hamido Restaurant

Jun 2018 – Present

- Supervised daily operations and coordinated a team of 15+ employees across front and back-of-house
- Reduced supply costs by 10% through improved inventory tracking and vendor management

Mobile Repair Technician — Cellphones and Repairs

Jan 2024 – Nov 2025

- Diagnosed and resolved hardware and software faults on iOS and Android devices using systematic troubleshooting techniques
- Performed data recovery and OS-level troubleshooting — directly applicable to endpoint support and device security

PROJECTS

Android App Static Analysis Lab

Apr 2026

- Decompiled and statically analyzed 10 VPN Android apps to examine AndroidManifest.xml and Network Security Configuration files
- Identified cleartext traffic permissions, absent certificate pinning, and NSC misconfigurations across all analyzed apps
- Contributed VPN findings to a group report covering 30 apps across VPN, social media, and food and restaurant categories

LeakLens — Browser Security Extension

Jul 2026

- Built a Chrome extension (Manifest V3) detecting Gmail phishing via sender domain and link mismatch analysis
- Integrated Google Safe Browsing through a Cloudflare Worker proxy, keeping the API key server-side to prevent credential exposure
- Implemented sensitive data exposure detection for passwords and other private data leaking into URLs

Man-in-the-Middle (MITM) Security Lab

Nov 2025

- Built a Ubuntu Linux virtual environment in VirtualBox to simulate application communication and intercept SSL/TLS traffic
- Used Wireshark and tcpdump to capture packets and identify how TLS misconfigurations expose unencrypted data
- Reproduced certificate validation errors using OpenSSL and documented attack vectors and remediations as a vulnerability assessment report on GitHub

Subway Surfers — Body Gesture Controller

Oct 2025

- Built a real-time computer vision system using Python, OpenCV, and MediaPipe Pose that translates physical gestures into game controls via PyAutoGUI
- Implemented edge-trigger and cooldown logic for responsive lane switching, jumping, and rolling — demonstrated live on LinkedIn
- Implemented shoulder-width-relative gesture thresholds so the system adapts to any body size or camera distance without manual recalibration

CERTIFICATIONS

BLS Certified — American Heart Association

Apr 2026

Basic Life Support certification | hands-on instruction

Google Cybersecurity Professional Certificate — Coursera

Jul 2025

8 courses: threat analysis, SIEM tools, network security, incident response, Linux, Python automation

Scientific Computing with Python — freeCodeCamp

Sep 2025

~300 hours covering data structures, algorithms, and Python scripting

TryHackMe — Pre-Security Learning Path

Apr 2025

Linux fundamentals, networking, web security basics | 7.5 hours

The Complete C++ Developer Course — Udemy

Feb 2025

22.5 hours covering C++ fundamentals, OOP, and systems programming
